Made in Germany
Made in Germany
Nabertherm with 500 employees worldwide have been developing and producing industrial furnaces for many different applications for 70 years. As a manufacturer, Nabertherm offers a very wide and deep range of furnaces. 150,000 satisfied customers in more than 100 countries offer proof of our commitment to excellent design, quality and cost efficiency. Short delivery times are ensured due to our complete inhouse production and our wide variety of standard furnaces.

Setting Standards in Quality and Reliability
Nabertherm does not only offer a wide range of standard furnaces. Professional engineering in combination with in house manufacturing provide for individual project planning and construction of tailor-made thermal process plants with material handling and charging systems. Complete thermal processes are realized by customized system solutions.

Innovative Nabertherm control technology provides for precise control as well as full documentation and remote monitoring of your processes. Our engineers apply state-of-the-art technology to improve the temperature uniformity, energy efficiency, reliability and durability of our systems with the goal of enhancing your competitive edge.

Global Sales and Service Network – Close to you
Nabertherm’s strength is one of the biggest R&D departments in the furnace industry. In combination with central manufacturing in Germany and decentralized sales and service close to the customer we can provide for a competitive edge to live up to your needs. Long term sales partners in all important world markets ensure individual on-site customer service and consultation. There are certainly reference customers who are using similar furnaces or systems close to you.

36 Months Warranty
Another quality feature is the 3-year warranty for the Arts & Crafts kilns. Due to the processing of high quality materials and the handicrafts manufacturing this is a matter of course for us.

Customer Service and Spare Parts
Our professional service engineers are available for you worldwide. Due to our complete inhouse production, we can despatch most spare parts from stock over night or produce with short delivery time.

Experience in Many Fields of Thermal Processing
In addition to furnaces for Arts & Crafts, Nabertherm offers a wide range of standard furnaces and plants for many other thermal processing applications. The modular design of our products provides for customized solutions to your individual needs without expensive modifications.

Chamber Kilns
Product Advantages Chamber Kilns

Multi-layer insulation with light-weight refractory bricks and energy-saving backing insulation adapted to the maximum kiln temperature

Only insulation materials that are not classified as carcinogenic according to TRGS 905, Class 1 or 2 are used

Durable light-weight refractory brick insulation inside the kiln ensures clean firing results

Dual-shell housing provides for low temperatures and optimal corrosion protection. Galvanized steel sheets on the sides

Rugged, self-supporting, vaulted arch construction

Door seal „brick on brick“, precisely ingrained by hand to ensure tight sealing

Ergonomic charging height with 800 mm base (chamber kiln N 50 E = 500 mm)

Solid state relays ensure low-noise heater operation

Protected door contact switch

Infinitely adjustable air inlet damper for optimal air supply during firing and reduced cooling times included in the scope of delivery for chamber kilns from 440 liters

Controller mounted on kiln door and removable for comfortable operation

Semi-automatic air inlet flap for residual drying in chamber kilns up to 300 liters. The flap closes automatically at a set temperature and does not have to be closed manually after the drying phase.

Exhaust air opening in the center back of the kiln roof ensures even extraction of the exhaust air in chamber kilns up to 300 liters

Motor-driven exhaust air flap in the middle of the kiln roof provides for optimal ventilation of the kiln for chamber kilns from 440 liters
Chamber Kilns, Heated from Five Sides

First-class craftsmanship, professional design, long service life and excellent temperature uniformity – chamber kilns from 100 liters up to 2200 liters round off the range of kilns for professionals. These kilns have proven their worth for many years, firing porcelain and stoneware and annealing glass, even when tightly stacked and at high working temperatures. You will find these chamber kilns in ceramic workshops, studios, clinics, schools and in private homes. They are recommended for frequent firing, when the kilns are tightly stacked and when excellent temperature uniformity is needed.

A kiln should not be operated permanently to its performance limits. If the kiln is often fired to its performance limits, we recommend our chamber kilns to 1340 °C. Most chamber kilns are available from stock.
Standard design

- Heating elements on support tubes ensure free heat radiation
- Heating from five sides and a special arrangement of the heating elements ensure optimum temperature uniformity
- Scope of delivery includes SiC floor plates to protect the floor heating and provide for safe stacking of the kiln furniture
- Base included in scope of delivery
- Door cover made from structured stainless steel
- Semi-automatic air inlet flap that closes automatically after the drying phase in the firing program for chamber kilns up to 300 liters
- Motor-driven exhaust air flap in the middle of the kiln roof for optimum ventilation of the kiln with chamber kilns from 440 liters
- Defined application within the constraints of the operating instructions

Chamber Kilns with Drawer Bottom or Bogie

The chamber kilns in the NW series combine the convincing quality benefits of the proven chamber kilns that are heated from five sides with a special feature. Charging these chamber kilns is much simpler, more ergonomic and also time-saving. With a drawer mechanism in the models up to 300 liters the floor can be easily pulled out. The larger models from 440 liters are designed as shuttle kilns with freely moving bogies. The optimal access in front of the kiln allows for simple and easy charging.

These models are especially suitable for ceramic workshops, studios, clinics and schools. Most kilns are available from stock, even larger models can be delivered within a short time.

The chamber kilns are available for maximum temperatures of 1300 °C or 1340 °C. If the kiln is often fired to its performance limits, we recommend our chamber kilns to 1340 °C.

- Heating from five sides and a special arrangement of the heating elements provide for optimal temperature uniformity
- Scope of delivery includes SiC floor plates to protect the floor heating and provide for safe stacking of the kiln furniture
- Door cover made from structured stainless steel
- Semi-automatic air inlet flap that closes automatically after the drying phase in the firing program for chamber kilns up to 300 liters
- Motor-driven exhaust air flap in the middle of the kiln roof for optimal ventilation of the kiln with chamber kilns from 440 liters
- Defined application within the constraints of the operating instructions

---

*Please see page 40 for more information about supply voltage*
Due to their good price-performance ratio, the Nabertherm chamber kilns heated from three sides are suitable for use in schools, kindergartens or occupational therapy. The heating elements are protected in grooves. For an intensive, professional use, we recommend our five-side heated chamber kilns.

The dual-shell, back-ventilated housing keeps the housing temperature low. A semi-automatic air inlet flap is included with standard scope of delivery. After the drying phase in the heating program, the flap closes automatically at a chosen temperature. No base flap has to be closed manually. The controller can be removed from the door bracket for convenient operation.

**Standard design N 140 E - N 280 E**
- Heating elements protected in grooves
- Heating from three sides (both sides and floor)
- Scope of delivery includes 3 ceramic supports and lower shelf to protect the bottom insulation and for safe stacking of the kiln furniture
- Base included in scope of delivery
- Defined application within the constraints of the operating instructions

**Standard design N 500 E**
- Freely radiating heating elements on support tubes
- Heating from three sides (both sides and floor)
- Scope of delivery includes SiC floor plate for even stacking of the kiln furniture
- Motor-driven exhaust air flap in the middle of the kiln roof for optimal ventilation of the kiln
- Defined application within the constraints of the operating instructions

---

Three-sided heating with heating elements protected in grooves (N 140 E - N 280 E)

Three-sided heating with heating elements on support tubes (N 500 E)
Chamber Kilns, Heated from Two Sides

Designed as chamber kilns with wide-opening door these models can be easily and clearly loaded. The appealing design and attractive price are convincing arguments for this kiln series. The heating elements are protected in grooves.

The kilns can be used for ceramics and glass or porcelain painting or also for simple fusing works. Most chamber kilns are available from stock. The infinitely adjustable air inlet opening in the door and the exhaust air opening in the roof ensure good ventilation inside the kiln and reduce cooling times.

- Manual zone control to optimize temperature uniformity
- Motor-driven air inlet flap that can be opened and closed in relation to the program
- Cooling fan for kilns up to 300 liters to reduce process times
- Stainless steel exhaust hood
- Motor-driven exhaust air flap
- Door hinges on the left side
- Base in special height
- Base mounted on castors
- Charging frame provides for ergonomic loading and unloading in front of the kiln
- Kiln furniture
- Observation hole in the kiln door (diameter 20 mm)
- Second bogie for NW kilns from 440 liters
- Door locking kit as set consisting of two door locks with two keys
Top Loaders
Product Advantages Top Loaders

Three-layer insulation with high-quality, energy-saving backing insulation for low external temperatures and a good energy balance for kilns up to 60 liters.

Two-layer insulation with durable lightweight refractory bricks and energy-saving backing insulation adapted to the maximum kiln temperature for kilns from 80 liters.

Only insulation materials that are not classified as carcinogenic according to TRGS 905, Class 1 or 2 are used.

Adjustable lid with quick-release lock and padlock.

Integrated gas-pressured springs for easy opening and closing of the lid.

Important data about power consumption and operating hours available via the information menu of the controller.

Infinitely adjustable air inlet in opening in the kiln bottom for good ventilation and short cooling times.

Housing shell made from structured stainless steel.

Durable lid seal (brick on brick).

Solid state relays ensure low noise heater operation.

Easy to use controller for precise temperature control, removable for comfortable operation.

Thermocouple protected in the insulation.

Connection for an exhaust air pipe (80 mm diameter).
**Top Loaders Round/Oval**

The attractive design, low weight, and convincing price-performance ratio are just a few of the advantages of our top loaders. These models always deliver very good firing results and are the right choice for hobby potters and workshops.

The particularly energy-saving refractory insulation and energy efficient backing insulation ensure that a maximum temperature of 1320 °C is reached with low electrical connected loads. The tabletop model Top 16/R is also suitable for testing glazes and firing samples.

For intensive professional use, we recommend our rectangular top loaders or chamber kilns with heating from five sides.

### Standard design
- Heating elements protected in grooves, heating from all around
- Three-layer insulation with light-weight refractory bricks and high-quality, energy-saving backing insulation, up to 60 liters (two-layer insulation from Top 80)
- Thermocouple protected in the kiln wall
- Sturdy, locking castors for easy movement of the kiln
- Top 16/R available as a tabletop model without castors
- Defined application within the constraints of the operating instructions

3 External dimensions vary when furnace is equipped with additional equipment. Dimensions on request
**Additional Equipment Top Loaders**

- **Raised base for Top 45 and Top 60**
- **Robust castors**
- **Wall bracket for the controller with 2.5 m connection cable**

**Bottom heating and manual zone control from 80 liters:**

Does your work need a very precise temperature uniformity? In this case we recommend the optional bottom heating for our top loaders from 80 liters. With our controllers, you can control the bottom heating as a second zone. Set your firing curve on the controller as usual. If you find that the temperature uniformity has to be changed from top to bottom, you simply adjust the ratio.
Top Loaders Rectangular

The rectangular top loaders from Nabertherm combine the benefits of a top loader with the sturdy design of a chamber kiln and are very good suited for professional use. The freely radiating heating elements always ensure perfect firing results. These models are ideal for working temperatures between 900 °C and 1230 °C. The infinitely adjustable fresh air opening in the bottom and the exhaust air opening on the side ensure good ventilation inside the kiln and allow the kiln to cool faster. Castors ensure easy movement of the kiln.

Standard design

- Heating elements on support tubes ensure free heat radiation
- Heating from both sides
- Castors
- Sturdy design
- Two-layer refractory insulation and energy saving backing insulation
- Defined application within the constraints of the operating instructions

Gas-Fired Kilns
**RAKU Kilns**

The RAKU kiln 100 is a gas-fired kiln for outdoor operations with standard propane gas. This kiln combines two different kiln concepts: It can either be used as a top loader or as top hat kiln. In the basic version, the top hat is lifted by two bars. As an accessory, the kiln can be supplied with a lifting stand. This frame is provided with a crank drive which makes it very easy to lift the top hat. With this version, you can operate the kiln by yourself, without problems. We can also provide the matching propane burner. However, you may decide to use your own model.

- Can be used as top hat kiln or top loader
- Easy and simple construction, applies particularly to the top hat
- High-quality insulation with low heat-storage capacity for short heat-up times
- Housing made of textured stainless steel
- Inspection holes for observing your fired ware
- Special flame manipulation for good temperature uniformity
- Defined application within the constraints of the operating instructions

¹External dimensions vary when furnace is equipped with additional equipment. Dimensions on request.
Gas-Fired Chamber Kilns

Some firing processes or connecting conditions require a gas-fired chamber kiln. Fast heating times and very good firing results are strong reasons for using such equipment.

Equipped with powerful gas burners the chamber kilns NB 150 - NB 600 are suitable for creative applications. An automatic temperature regulation is included in the basic model. The controller starts controlling after the burner has been manually ignited by automatic switching the burner between high and low loads. The burners have been optimized to allow relatively precise control from 300 °C. Despite this, we still recommend drying the charge completely to avoid waste caused by rapid heating up in the lower temperature range. At the end of the program, the burners are automatically shut off.

- Powerful, atmospheric burners for operation with natural gas (min 9.9 kWh/m³) or propane gas.
- Required flow pressure under full load min. 45 mbar
- Depending on the application, special positioning of the gas burners with flame guidance provides for optimal temperature uniformity
- Manual set-up of burner power and atmosphere (oxidizing or reducing)
- Gas fittings with flame control and safety valve in accordance with DVGW (German Technical and Scientific Association for Gas and Water)
- Multi-layer, reduction-proof insulation with light-weight refractory bricks and high-quality back-up insulation resulting in low gas consumption
- Self-supporting and rugged ceiling, bricks laid in arched construction. Only fiber materials are used which are not classified as carcinogenic according to TRGS 905, class 1 or 2.
- Environment-friendly, long-life powder-coating of housing
- Dual shell housing
- Dual shell door with long-live sealing
- Door is adjustable
- Exhaust hood
- Base included in scope of delivery
- Comfortable charging height with base of 760 mm (NB 150, NB 300) and 600 mm (NB 400, NB 600)
- Defined application within the constraints of the operating instructions

Fusing Furnaces
Product Advantages Fusing Furnaces

Closely arranged roof heating elements protected in quartz glass tubes for direct, even heating of the glass

Level table surface with rugged refractory insulation and marked charge surface

Only insulation materials that are not classified as carcinogenic according to TRGS 905, Class 1 or 2 are used

Appealing, dual-shell stainless steel housing

Large handles on the right and left sides of the lid (GF 600 in the middle)

Gas pressure springs for easy opening and closing of the lid

Adjustable, large quick-release fasteners – also suitable when working with gloves

Closable opening for ventilation, for faster cooling and to observe the charge

Rugged base on castors with surface for glass and tools

Ergonomic charging height of 860 mm

Solid state relays ensure low-noise heater operation

Heating switches off when the lid is opened
Fusing Furnaces with Movable Table

Fusing furnaces in the “GFM” series were developed for special production requirements. The GFM series combines the impressive quality benefits of the GF series with the option of charging the table outside the furnace. The table runs on swivel castors and can thus be moved freely.

The scope of delivery includes a flat table for fusing work; additional tables can be added. An interchangeable table system on rails is especially economical, as one table can be charged while the other is in the furnace. Instead of flat tables, different tables with different heights can be used if the furnace is to be used for higher components, for example.

Standard design
- Heated lid with fixed frame
- Base included in scope of delivery
- Defined application within the constraints of the operating instructions

1External dimensions vary when furnace is equipped with additional equipment. Dimensions on request
The fusing furnaces in the GF 75 - GF 1425 series are designed for professionals. Closely arranged heating elements protected in quartz glass tubes ensure very good temperature accuracy during fusing or bending on the complete area of the table. All models have an appealing, dual-shell stainless steel housing. The level table surface made from rugged, durable refractory material and the lid opening with gas pressure springs as support simplify charging of the furnace. The optimized electrical connected load ensures that the glass heats up quickly.

GF 240 fusing furnace

GF 75 fusing furnace
### Standard design

- Heating elements protected in quartz glass tubes
- Controller integrated on the right side of the furnace to save space
- C440 controller included in scope of delivery
- Defined application within the constraints of the operating instructions

Additional Equipment Fusing Furnaces

Observation window in air inlets to observe the glass.

Motor-driven lid opening

Additional tables to extend the furnace system for GFM models; interchangeable table system to utilize residual heat and reduce cycle times by changing tables while the furnace is still warm.

Floor heating provides for even heating of larger objects

Motor-driven exhaust air flap for fast cooling after firing

Cooling fan for faster cooling with the lid closed
Top Loader as Fusing Furnaces

This kiln range is the ideal choice for many fusing applications. The insulation is made from lightweight refractory bricks with protected heating elements in the lid, fusing furnaces F 75 and F 220 have additional side heating.

- Housing made of textured stainless steel
- Controller mounted on the right side of the kiln with removable holder for comfortable operation
- Insulation made of lightweight refractory bricks for clean firing results
- Lid with adjustable quick-release lock and padlock hasp
- Adjustable lid mechanism
- Long-life lid seal (brick on brick)
- Lid interlock safety switch
- Heating elements in the lid, fusing furnaces F 75 and F 220 have additional side heating
- Solid state relays provide for low-noise operation
- Powerful gas springs support lid opening
- Lockable castors for easy transport of kiln without the need for lifting
- Top loader F 30 as tabletop model without castors
- Manual-Zone-Regulation for F 220 (lid and sides)
- Defined application within the constraints of the operating instructions

Additional equipment
- Higher chassis

¹Fusing of 32 A if connected to 230 V

²External dimensions vary when furnace is equipped with additional equipment. Dimensions on request

*Please see page 40 for more information about supply voltage
A high-quality furnace is indispensable for professional glass bead tempering. The MF 5 model is the ideal furnace for cooling large glass beads or glass jewelry. For charging the glass beads, the door is equipped with a window which can be closed with a filler piece when the furnace is used for other applications. The infrared heating prevents direct contact with the heating elements so the glass beads cooling furnace can be safely opened during operation without heating interruption.

With a maximum temperature of 950 °C, this furnace is multifunctional, and can be used for fusing and enameling applications, for decorating and for preheating frits and other materials.

Installation and Exhaust Air Extraction

Installation
When the kiln is being installed, it is important that there is a safety gap of 0.5 m between the kiln and flammable materials on all sides and 1.0 m to the ceiling. If the ceiling is lower, heat-resistant insulation must be installed. If non-flammable materials are used for insulation the minimum distance between the kiln may be reduced to 0.20 m at the sides. The kiln must be placed on a non-flammable surface (fire safety class A DIN 4102 – Example: concrete, tiles, glass, aluminum or steel). The floor must be level so that the kiln can stand upright. Kiln and switchgear are not designed to be used outdoors.

Exhaust Air Extraction
When ceramics are fired, depending on the quality of the clay and/or glaze, they can emit gases and vapors that are harmful to health. Therefore, exhaust gases must be directed outdoors in a suitable manner. We recommend the connection of an extraction pipe to the kiln to remove the exhaust gases.

An 80 mm diameter zinc-plated steel pipe or stainless steel pipe is suitable for this purpose (up to model N 300/H). The pipe must be installed constantly rising. Sufficient room ventilation is necessary to ensure that fresh air is mixed with the exhaust gases.

A maximum exhaust gas temperature of approx. 200 °C can be assumed for the piping system. There is a risk of burning at the bypass connection and the piping. The wall duct must be made from heatproof material. We recommend that a local ventilation company dimensions the exhaust gas piping.

Process Control and Documentation

Controller

The Nabertherm controllers convince with their intuitive operation and a contemporary design. They are operated via a central control dial (Jog Dial). Temperatures and program information are presented in a clear, high-contrast LC display. Optimum temperature uniformity over the entire temperature range through multi-stage PID parameterization.

In developing the controller, the ease of use was the focus. For convenient operation, the controller may be taken off from the holder at the kiln. The program is entered in plain text, so that all steps are easy to follow. Firing curves can be saved under their name for unique assignment (e.g. glaze firing). The user can choose between 17 languages.

When connected to a kiln for firing ceramics, five sample programs are stored in the controller (two bisque firings and three glaze firings). These programs can easily be used as a basis for an individual adaptation to the actually required firing curve. You can overwrite and save again with the required times and temperatures. Via an integrated real time clock, the kiln can be started delayed e.g. in the evening for a firing overnight.

Each controller of series B400 to P470 is equipped as standard with a USB interface. The firing will be documented on a USB stick, which has to be inserted during the operation. After the firing has been finished it can be easily read-out using the software NTGraph (freeware), which is based on Microsoft Excel as user interface. The visualization is presented in tabular form or as a clearly colored graphic.

Supply Voltages for Nabertherm Furnaces

1-phase: All furnaces are available for 110 V - 240 V, 50 or 60 Hz.
3-phase: All furnaces are available for 200 V - 240 V and/or 380 V - 480 V, 50 or 60 Hz.

The connecting rates in the catalog refer to the standard furnace with 400 V (3/N/PE) respectively 230 V (1/N/PE).
Controller Operation

1. Display
2. Main operating button (Jog Dial) (turn/push)
3. Button for “Start/Hold/Stop”
4. Button for “Menu” selection e.g. save, copy or delete program
5. Button for “Back” function
6. Button to activate the Info-Menu
   e.g. final consumption in kWh, operating hours
7. USB interface

Displays and Functions

- Entering a new program
- Loading saved programs
- Enter the start time (day and time)
- Saving a program under the program name
- Display of power consumption in kWh
- Remaining time display of the current program
- Controller removable for ease of use
- Documentation of started programs on a USB stick
Process Control and -Documentation

Data Storing of Nabertherm Controllers with NTLog Basic

The controller B400/B410, C440/C450, P470/P480 are equipped with a USB interface as standard, which allows data recording via the NTLog Basic. The process data is recorded with a client-side USB-stick which is inserted during the process.

The process documentation with NTLog Basic requires no additional thermocouples or sensors. Only data recorded which are available in the controller. The data stored on the USB stick (up to 80,000 data records, format CSV) can afterwards be evaluated on the PC either via NTGraph or a spreadsheet software used by the customer (e.g. MS-Excel). For protection against data manipulation the generated data records contain checksums.

Visualization with NTGraph for Single-Zone Controlled Furnaces

The process data from NTLog can be visualized either using the customer’s own spreadsheet program (e.g. MS-Excel) or NTGraph (Freeware). With NTGraph Nabertherm provides for an additional user-friendly tool free of charge for the visualization of the data generated by NTLog. Prerequisite for its use is the installation of the program MS-Excel for Windows (version 2003/2010/2013). After data import presentation as diagram, table or report can be chosen. The design (color, scaling, reference labels) can be adapted by using prepared sets.

NTGraph is available in seven languages (DE/EN/FR/SP/IT/CH/RU). In addition, selected texts can be generated in other languages.

Software NTEdit for Entering Programs on the PC

By using the software NTEdit (Freeware) the input of the programs becomes clearer and thus easier. The program can be entered on customers PC and then be imported into the controller with a USB stick. The display of the set curve is tabular or graphical. The program import in NTEdit is also possible. With NTEdit Nabertherm provides a user-friendly free tool. A prerequisite for the use is the client installation of MS-Excel for Windows (2007/2010/2013). NTEdit is available in eight languages (DE/EN/FR/SP/IT/CH/RU/PT).
VCD-Software for Visualization, Control and Documentation

Documentation and reproducibility are more and more important for quality assurance. The powerful VCD software represents an optimal solution for single multi furnace systems as well as charge documentation on the basis of Nabertherm controllers.

The VCD software is used to record process data from the controllers B400/B410, C440/C450 and P470/P480. Up to 400 different heat treatment programs can be stored. The controllers are started and stopped via the software at a PC. The process is documented and archived accordingly. The data display can be carried-out in a diagram or as data table. Even a transfer of process data to MS Excel (.csv format *) or the generation of reports in PDF format is possible.

Features
- Available for controllers B400/B410/C440/C450/P470/P480
- Suitable for operating systems Microsoft Windows 7 or 8/8.1 or 10 (32/64 Bit)
- Simple installation
- Setting, Archiving and print of programs and graphics
- Operation of controllers via PC
- Archiving of process curves from up to 16 furnaces (also multi-zone controlled)
- Redundant saving of archives on a server drive
- Higher security level due to binary data storage
- Free input of charge data with comfortable search function
- Possibility to evaluate data, files can be converted to Excel
- Generation of a PDF-report
- 17 languages selectable
